

## TOTAL LIFE CYCLE SERVICES

Keep your control room, operator consoles and chairs “like new” to promote situational awareness, process reliability, health and safety.

### Performance Inspections (Twice per year)

#### Consoles

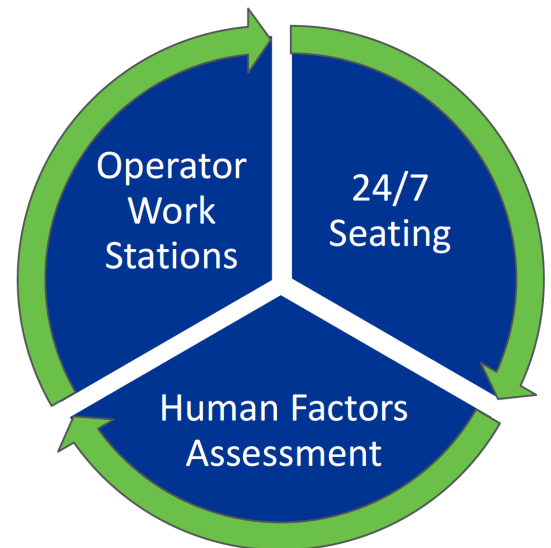

- Worksurface alignment and front contour edge.
- Alignment and function of exterior panels.
- Overall appearance and function of the operator workstation.
- Inspect lift system including lift columns, controller, main control box, pinch points, and cables.
- Documentation and operating instructions (as needed).

#### Intensive Use Seating

- Proper seating improves performance and reduces risk.
- Chair fitting and adjustments.
- Check back rests, lumbar support, armrests, and headrests.
- Check wear and tear on the fabric or leather exterior.
- Chair repair includes free pick-up and delivery.
- Documentation and operating instructions (as needed).

### Control Room Assessment (Once per year)

- Certified ergonomist to address human factors and operator concerns.
- Identify clutter, common obstacles, trip hazards and make recommendations.
- Control Room Lighting (level, spectrum, type, locations).
- Ambient noise level testing and recommendations.
- Test traffic patterns and recommend changes as needed.
- Adjacencies within and around the control room.
- Sight lines and display screens (quantity, size, content).
- Alarm management review and recommendations.
- Documented report and recommendations.
